Hello,

The Pre-RD group has retrieved 4/5 of the remaining receivers for today, near RM 5 (Cathedral Park). The vessel is currently stationed at Willamette Cove retrieving PDI-AR-A13, which was previously tethered to shore. The crew found the cable pre-cut on the shore next to, what appeared to be, a shelter. Fortunately, the cable was still attached to the mooring and the crew was able to locate the receiver without issues. When the crew re-anchors the cable, they plan to tether to a different location nearby (photo 2) in attempts to deter locals from cutting the cable again. All fish tracking activities are expected to be complete within the hour.

Jonni
